94%
REQUESTS QUOTED SAME-DAY

$42k
RECOVERED LABOR ANNUALLY

A digital and offset print shop running 60 to 80 jobs a week was quoting from a spreadsheet, writing job tickets by hand, and finding out about missed deadlines when the customer called. Repeat customers waited hours for reorder pricing. CoreBridge replaced the spreadsheet, the tickets, and the phone calls with one system.

THE PROBLEM

- Quotes built in a spreadsheet and re-keyed into QuickBooks
- Handwritten job tickets lost between prepress and press
- No shared view of due dates; rush jobs frequently bumped
- Reorders re-estimated from scratch every time
- Owner was the only person who could price a job

THE SOLUTION

- Product templates with machine, material, and finishing costs built in
- One-click reorder from job history, no re-estimating for repeat customers
- Digital production boards by department: prepress, press, finishing, and shipping
- Due-date visibility and rush flags on every job so nothing gets bumped without approval
- Proof approval, invoicing, and payment handled through a single customer link

ESTIMATE → PREPRESS → PRESS → FINISH → SHIP → INVOICE

See why 10,000+ businesses have made the switch

"Our front desk used to wait on me to price anything over a business card. Now they quote it while the customer's still on the phone."
